

## [Living with Wildfire: Plants & People](#)

[View PDF](#)

Date

Wed, 05/23/2018

Time

6-7pm

Location

[Saddle Rock Trailhead \(covered shelter\)](#)

It's HOT, DRY, and sometimes there is WILDFIRE! How do these plants do it? Find out how our local Shrub-steppe habitat not only survives, but thrives...and how WE fit in. In this 4-part series, Susan Ballinger, CDLT Conservation Fellow, will begin each session with an introduction to shrub-steppe plant communities followed by a talk by the featured local partner. The public is invited to attend any or all to learn more about shrub-steppe ecosystems and recommended steps to take that will reduce the risk of future damage by wildfire.

### **Part #3**

Patrick Haggerty, Cascadia Project Coordinator. Learn all about how Cascadia can help landowners make their land fire resilient while helping native plants and animals.
